# TUNE INTO PIANOFORCE RADIO

**First class, front row seats by Pianoforce.**

Enjoy a live non-stop piano radio concert with streaming internet piano, accompanied by original audio tracks from your favorite artists.

Just connect your Performance Player System to the internet and select Pianoradio to tune in automatically. Programmed exclusively for you by Pianoforce and Stars & Tracks

# KEESCAN

## Optical recording system for acoustic pianos.

The ultimate accessory for recording your own piano performance. High precision is the nature of this optical sensor rail unit which captures the movement, speed and duration of each key and the sustain pedal. Your composition is converted into MIDI data and sent to the Performance Player system or to a connected computer for further processing or storing into memory.

Professionals, teachers, students or just beginners get a powerful tool for saving their live piano performance. While connected to a Performance Player system installed on the same piano, an immediate playback of the recorded music is possible. KEESCAN can easily be installed in any acoustic piano directly at your home or at your piano dealer.

# WIFI REMOTE CONTROL

## Stay in touch with your player piano.

Use your iPhone or iPod touch as a wireless remote control for your Player piano. With these popular Apple products, you are able to comfortably and effortlessly control your Performance Player System. The user friendly multi touch and colorful graphic interface helps you to easily navigate your way through the functions. First, download the software application free of charge from your iTunes App Store and install the iPackage available at Pianoforce or at your piano dealer. Next simply touch your Pianoforce remote icon on the screen and you are ready to create, play, record, or organize your music selections.

# SPECIFICATIONS AND FEATURES:

**Internal Library** -The Performer comes with memory space for a large internal music library. Your favorite CD's or thousands of MIDI files can be stored in this internal library and played without having to insert or change the CD.

**USB** - Universal connection to mass storage devices, such as external USB hard drive, jump drive, floppy drive and others, for users who want to save and organize very large music libraries or download and store song files, Audio CDs and play lists.
