

# *The W Y M A N TriPhonic™ Bass Bridge*

*Because the transference of bass string vibration is critical to the sound and performance of the grand piano, Wyman grand pianos\*use the exclusive TriPhonic™ cantilevered bass bridge for optimum tone.*

*By partitioning the bass bridge runner and apron into 3 sections, both are able to transfer the vibration from the bass strings more efficiently, allowing Wyman grand pianos to sound larger than traditional brands costing thousands of dollars more.*
